This book is a textbook written by the calculation methods courses, mainly from a practical perspective on the numerical methods used in modern science and technology and engineering and theoretical calculation for institutions of higher learning non-the mathematics professional graduate and advanced undergraduate learning. Clarifying the basic principles of each numerical methods, highlighting how to construct and analyze specific algorithm, and write a detailed calculation steps and non-formal language program, car typical example; computational workload, convergence, stability and error estimates, scope, and the advantages and disadvantages of a brief demonstration and commentary. The book mainly from a practical point of introduction to numerical methods and theory in modern science and technology and engineering. Clarifying the basic principles of each numerical methods, highlighting how to construct and analyze specific algorithms. Brief summary Exercises of 1.5 sexual state of the basic concepts of the Table of Contents Chapter 1 Introduction 1.1 Mathematical Introduction 1.2 algorithm and its efficient 1.3 machine number system 1.4 error with the numerical stability of the algorithm functional analysis of a second Chapter concept 2.1 Distance 2.3 compression mapping 2.4 linear operator with a limit of 2.2 norm operator norm elimination method 2.5 inner product...
